PROFILE

Early-career product builder who takes a product from the problem to something live: choosing the problem, designing it, building it with AI-assisted engineering, and selling it. Founder and sole builder of Mazboot, a live Arabic profit monitor for online stores in Egypt, shipped with an owner app and five platform integrations in its first month. Grounded in product design (decision support, information architecture, design systems) and two and a half years of B2B sales and customer operations supporting US business customers.

PROFESSIONAL EXPERIENCE

Mazboot | Founder & Sole Builder | mazboot.com.co | September 2026 - Present

- Designed, built, and launched a live Arabic (right-to-left) SaaS that follows each order to delivery or return and reports every product's real profit after cancellations, returns, shipping, and ad spend.
- Built read-only integrations with EasyOrders, Shopify, WooCommerce, the Bosta courier, and Meta ad spend on Cloudflare Workers and D1, sized to free-tier limits; 178 commits and 48 test files in the first month.
- Shipped an installable owner app that opens on the profit and ranks actions by their value in pounds, plus Mazboot's own design system; the first real store connected in week one and reshaped onboarding.
- Probed the store platform's API before writing product code, which disproved four assumptions and changed the sync design.
- Own positioning, pricing, outreach, and onboarding; early stage, and no customer outcome is measured yet.

Concentrix Egypt | B2B Sales & Customer Operations | March 2024 - October 2026

- Supported US business customers with registration, purchasing, pricing, product benefits, and account decisions across calls and email.
- Qualified leads, handled objections, conducted follow-up, and documented interactions in Salesforce/CRM and Microsoft 365 workflows.
- Ranked within the top 2.5% of performers in Q1 2025 and exceeded performance targets for approximately ten months.

SELECTED PROJECTS

Valora | AI-Assisted B2B Sales-Coaching Platform | Independent Product Design Project

- Designed manager dashboards and multi-role workflows for evidence review, coaching, AI confidence and governance, permissions, and sharing.
- Built information architecture, design-system foundations, and a working prototype that ranks coaching opportunities and keeps the manager's decision explicit.

Noon | Mobile Product-Page Redesign | UX/UI Project

- Redesigned a mobile product page to improve hierarchy, trust, delivery clarity, and access to the primary purchase action, guided by competitive research and interface analysis.

More projects

Booking.com (iOS concept): redesigned result cards and an expanded state so total cost and cancellation terms resolve in the list, not at checkout.

Career OS (live personal tool): designed and built a job-search operating system that counts evidence such as interviews, tests, and shipped work rather than activity.

Karma Shop (client engagement, in progress): product design for a live e-commerce business under real constraints.

SKILLS

Build (AI-assisted, with Claude Code): Cloudflare Workers and D1, Next.js and TypeScript, Vercel, platform APIs and webhooks, Playwright and unit tests

Product Design: Figma, FigJam, information architecture, user flows, prototyping, interaction design, responsive and RTL UI, design systems

Product & Research: problem selection, pricing and positioning, competitive research, interface analysis, evidence synthesis

Domain & Tools: B2B workflows, e-commerce operations (EasyOrders, Shopify, Bosta), human-centered AI, Salesforce/CRM, Microsoft 365

Languages: Egyptian Arabic (native); English (strong professional communication)

EDUCATION

University of Sadat City | Degree in Veterinary Medicine | September 2020 - October 2025 (graduated)
