PROFILE

Early-career Product Designer focused on human-centered AI, B2B systems, complex workflows, and decision support. Founder of Mazboot, a live Arabic profit-monitoring product for online stores in Egypt, designed and built end to end with AI-assisted engineering. Brings two and a half years of B2B sales and customer-operations experience supporting US business customers. Skilled in information architecture, user flows, prototyping, design systems, interface analysis, and AI-assisted research.

PROFESSIONAL EXPERIENCE

Mazboot | Founder & Product Designer | mazboot.com.co | September 2026 - Present

- Defined, designed, and launched a live Arabic (right-to-left) SaaS that connects read-only to EasyOrders, Shopify, and WooCommerce and reports each product's real profit after cancellations, returns, shipping, and ad spend.
- Designed the landing page, profit report, store-connection flow, and phone alerts on an IBM Carbon-based design system adapted for Arabic, phone-first use from WhatsApp, and money-first data tables.
- Built trust into onboarding (read-only access, customer data deleted before storage, a free first report) after early conversations showed trust and setup effort, not report value, were the main barrier.
- Own positioning, pricing, outreach, and onboarding; the first store is connected and no outcome is measured yet.

Concentrix Egypt | B2B Sales & Customer Operations | March 2024 - October 2026

- Supported US business customers with registration, purchasing, pricing, product benefits, and account decisions across calls and email.
- Qualified leads, handled objections, conducted follow-up, and documented interactions in Salesforce/CRM and Microsoft 365 workflows.
- Ranked within the top 2.5% of performers in Q1 2025 and exceeded performance targets for approximately ten months.

SELECTED PRODUCT DESIGN PROJECTS

Valora | AI-Assisted B2B Sales-Coaching Platform | Independent Product Design Project

- Designed manager dashboards and multi-role workflows for evidence review, coaching, AI confidence and governance, permissions, and sharing.
- Built information architecture, design-system foundations, and a working prototype that ranks coaching opportunities and keeps the manager's decision explicit.

Noon | Mobile Product-Page Redesign | UX/UI Project

- Redesigned a mobile product page to improve hierarchy, trust, delivery clarity, and access to the primary purchase action, guided by competitive research and interface analysis.

More projects

Booking.com (iOS concept): redesigned result cards and an expanded state so total cost and cancellation terms resolve in the list, not at checkout.

Career OS (live personal tool): designed and built a job-search operating system that counts evidence such as interviews, tests, and shipped work rather than activity.

Karma Shop (client engagement, in progress): product design for a live e-commerce business under real constraints.

SKILLS

Product Design: Figma, FigJam, information architecture, user flows, wireframing, prototyping, interaction design, responsive and RTL UI, design systems

Research & Evaluation: competitive research, interface analysis, evidence synthesis, usability-focused critique

Build & Tools: AI-assisted product and front-end build (Claude Code), Vercel and Cloudflare deployment, Salesforce/CRM, Microsoft 365

Domain: human-centered AI, B2B workflows, e-commerce operations (EasyOrders, Shopify, Bosta), customer operations

Languages: Egyptian Arabic (native); English (strong professional communication)

EDUCATION

University of Sadat City | Degree in Veterinary Medicine | September 2020 - October 2025 (graduated)
